STREAMLINER

EN

FOR TALL AND TALLER

Thanks to its suspension, the Streamliner is perfectly suited to extended touring and mountain biking in rough terrain. Once your child has outgrown the Singletrailer the fun really starts as they can pedal along with you or take a break when they need it. In addition kids learn how to balance and train their bike handling skills. The Streamliner is compatible with 29" wheels.

The Streamliner+ is the logical step up from the Streamliner: Simply attach the separately available Streamliner+ retrofit kit onto the Streamliner and your child will be riding independently on their beloved Streamliner.

The Streamliner+ conversion kit consists of the frame triangle, suspension fork, front wheel and front brake. The 160 mm travel of the Streamliner remains available on the rear wheel, whilst the hugely responsive fork offers 85 mm of travel. Sounds promising? www.en.tout-terrain.de

FEATURES

Smooth-running and child-friendly components with high performance brake

minimum inseam of 35 cm

160 mm spring travel

Maximum maneuverability thanks to CNC-manufactured and ball-bearing joint

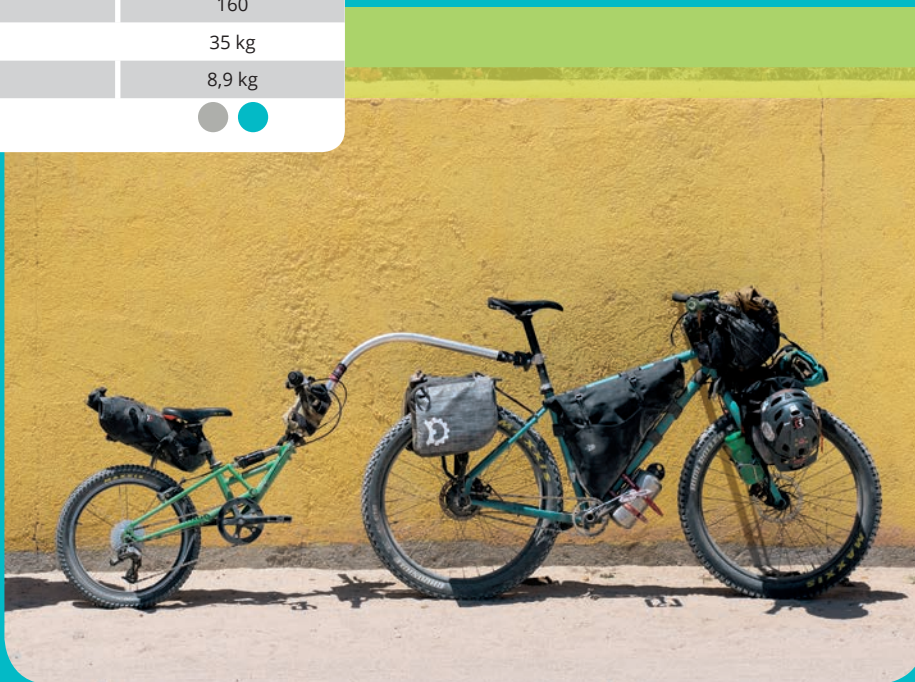

High quality air suspension for infinitely variable adjustment to the body weight

AT A GLANCE

TECHNICAL SPECIFICATIONS

Packing size cm	104 x 55 x 20
Wheel size	20"
Travel mm	160
Payload max.	35 kg
Total weight	8,9 kg
Colors
